Why Clean Your Ducts?

*Professional duct cleaning
reduces allergy and disease
causing dust in your living
environment, improves furnace
efficiency and reduces dust
around your home or office!*

THE DUCT DOCTOR

A Division of Paul's Plumbing & Heating Ltd.

(204)-778-DUCT

THINK ABOUT IT... A BUILDUP OF 1/16 OF AN INCH OF DIRT ON A HEATING OR COOLING COIL

CAN RESULT IN A DECREASE IN EFFICIENCY OF UP TO 21%

POWER BRUSHING

With your system under suction our technician will brush the inside walls, tops & bottoms of your ducts removing the caked on dirt & dust.

FORWARD SKIPPER

After your ducts have been brushed, our technician uses a forward skipper which snakes its way from your register to the main line discharging compressed air in a 360° pattern. This ensures that even the smallest dust particles are removed from the duct. This is also the

only device that will clean the damper and duct transition deep inside the duct system.

REVERSE SKIPPER

Then the main lines of the system are cleaned with the reverse skipper, discharging air in a 360° pattern. This will loosen the dirt and debris which will be removed from the main lines by the vacuum.

The furnace and all combustion components are cleaned. The heat exchanger is inspected for stress cracks and carbon monoxide leaks. The fan motor is cleaned and

lubricated, the humidifier is inspected and a multi-point check system is performed. If the system has air conditioning, then both sides of the coil are cleaned carefully with high pressure air and, if required, a hot water wash.

WARNING: Allergy and disease-causing dust, pollen, animal dander, mouse droppings, dust mites, fungus and bacteria, colds and flus have set up housekeeping in your heating ducts. Each time the fan goes on, it forces them into your living environment for you to breathe. Now recognized as a major allergy and disease-causing problem by the American Lung Association and other leading medical authorities, doctors and allergists commonly prescribe home air duct cleaning as a solution. Even new homes have been found to contain hazardous construction materials & dry-wall dust within the air duct system.

fact:

One out of six people who suffer from allergies do so because of the direct relationship of the fungi and bacteria in the air duct systems.

fact:

Indoor air is found to be 70% more polluted than outdoor air and most people spend 60—90% of their time indoors.

fact:

Most commercially purchased fiberglass filters are only 7% efficient in stopping dirt, dust, pollen, etc from passing through it.
